

Our Learning from Spring 2

Science Week

This year science week was around the topic of 'Time'. As a school we competed in some running noting down the times to see if being older meant you are faster. This was proven to be the case. Also, we experimented on reaction times and whether there was any pattern to how fast we caught a falling ruler. We then researched about time on different planets in our Solar System to see whether they have the same minutes/hours/days/years as us on Earth.

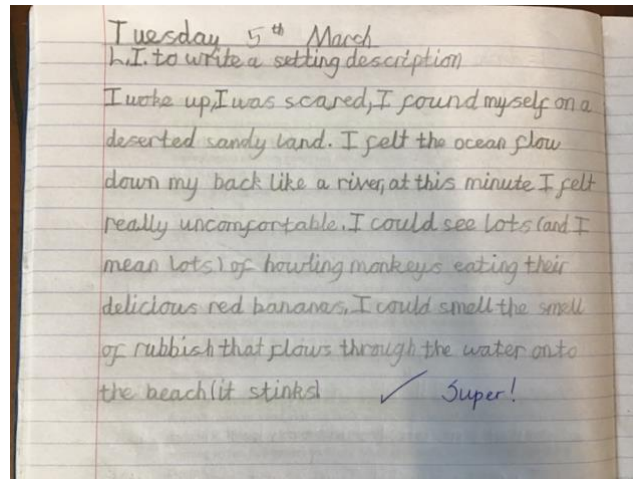

History – Ancient Greece

In this Topic, the children have learnt 'whereabouts in our history Ancient Greece is on the timeline. They have produced some excellent PowerPoint presentations on 'What the Greeks did for us' around The Olympics. They have all researched this topic brilliantly and I have been very impressed with how they have all presented their information. Each child has had time to show their presentation to the whole class.

Star Writers!

I have been exceptionally impressed with the writing all children have produced, using amazing vocabulary and thinking about including all appropriate features. Following this they have also edited their own work to make any necessary improvements. Keep up the wonderful work Class 4!

Happy Easter Everyone!
